

Math 9 – Unit 3: Solving Equations

Lesson 3.3: Solving with Brackets

Name: Mr. Hager
 Date: Dec 12, 2022

Learning Goal: We are learning to solve equations that contain brackets.

The next layer to solving equations is to have brackets in the equations. With brackets, you first need to expand (using the Distributive Property), simplify, then use the skills from the last two lessons to solve. Here we go!!

a) $2(x-3)=2$

$$2x - \cancel{6} = 2$$

$$ +6 +6$$

$$\frac{2x}{2} = \frac{8}{2}$$

$$x = 4$$

c) $2(3p+4)=14$

$$6p + 8 = 14$$

$$ -8 -8$$

$$\frac{6p}{6} = \frac{6}{6}$$

$$p = 1$$

b) $3(y+2)=-9$

d) $-24=4(h+3)$

e) $3(m+1)+10=8-2m$

$$3m + 3 + 10 = 8 - 2m$$

$$3m + \cancel{13} = 8 - 2m$$

$$+2m -13 -13 +2m$$

$$\frac{5m}{5} = \frac{-5}{5}$$

$$m = -1$$

f) $8-3x=4(x-3)+6$

g) $5(2x-3) = 2(x-2) + 5$

$$10x - 15 = 2x - 4 + 5$$

$$10x - 15 = 2x + 1$$

$$\begin{array}{r} -2x \\ -2x \end{array} \quad \begin{array}{r} +15 \\ +15 \end{array} \quad \begin{array}{r} -2x \\ -2x \end{array} \quad \begin{array}{r} +1 \\ +1 \end{array}$$

$$\frac{8x}{8} = \frac{16}{8}$$

$$x = 2$$

checking Your answer:

h) ~~$4(d+7) = 44 + 2(d+6)$~~

$$5(2(2)-3) = 2(2-2) + 5$$

$$5(1) = 2(0) + 5$$

$$5 = 5$$

😊

i) $4(n-2) - (n+3) = n-1$

$$4n - 8 - n - 3 = n - 1$$

$$3n - 11 = n - 1$$

$$\begin{array}{r} -n \\ -n \end{array} \quad \begin{array}{r} +11 \\ +11 \end{array} \quad \begin{array}{r} -n \\ -n \end{array} \quad \begin{array}{r} +1 \\ +1 \end{array}$$

$$\frac{2n}{2} = \frac{10}{2}$$

$$n = 5$$

j) $4(k-7) - 2(k+3) = -15k$

k) $3(2x+1) - (x-2) = 2(x+4)$

$$6x + 3 - x + 2 = 2x + 8$$

$$5x + 5 = 2x + 8$$

$$\begin{array}{r} -2x \\ -2x \end{array} \quad \begin{array}{r} -5 \\ -5 \end{array} \quad \begin{array}{r} -2x \\ -2x \end{array} \quad \begin{array}{r} -5 \\ -5 \end{array}$$

$$\frac{3x}{3} = \frac{3}{3}$$

$$x = 1$$

Success Criteria:

- I can use the distributive property to eliminate brackets, then solve the equation normally
