

## Lesson #3: Slope of a Line

Date: \_\_\_\_\_

**Learning Goal:** We are learning how slope impacts a linear equation. It's all downhill from here!

In this lesson, we will explore the most significant property of a linear relationship: the slope! The slope of a line tells us how the relationship is changing and can be thought of as how slanted/steep the line is. It has many important applications such as engineering the initial climb of a roller coaster to making safe ramps, but today we will focus on the algebra and understanding how to calculate the slope of a line.

First, let's look at the slope from a geometric perspective. The slope, defined by the letter  $m$  for no apparent reason, is:  $m = \frac{\text{Rise}}{\text{Run}}$

**Example 1:** Given the line with two points, calculate the slope.**Example 2:** Given the line, locate two points, then calculate the slope.

Are slopes always positive? There are 4 possible slopes:

**Example 3 and 4: Calculate the slopes of each line.**

Now that we know about slope, we can derive a formula so that we do not need a graph.

**Examples 5-8:** Given the points, calculate the slope.

5.  $(7, -10), (9, -7)$

6.  $(-6, -17), (-20, 11)$

7.  $(6, -12), (6, 1)$

8.  $(-3, 9), (3, 9)$

**Example 9:** A ramp needs to be constructed to go from the ground to a doorway. The doorway is 90 cm from the ground and the ramp needs a slope of  $\frac{2}{9}$ .

a) Calculate how far the ramp will start from the edge of the house.

b) Calculate the length of the ramp.

**Example 10 and 11: Calculate the missing coordinate.**

10.  $(2, y)$  and  $(-3, -2)$ ; slope:  $\frac{3}{5}$

11.  $(x, 4)$  and  $(-5, 10)$ ; slope:  $\frac{3}{2}$

**Success Criteria**

- I can identify the four types of slope: positive, negative, zero, undefined
- I can find the slope of a line graphically by studying its  $\frac{\text{rise}}{\text{run}}$
- I can calculate the slope of a line algebraically by using the formula  $m = \frac{y_2 - y_1}{x_2 - x_1}$
- I can find a missing coordinate, if given the slope
