

$$x^2 + 5x + 6$$

$$= (x+3)(x+2)$$

$$\text{either } x+3=0 \\ x=-3$$

or

$$x+2=0 \\ x=-2$$

$$SS \{ -3, -2 \}$$

$$x(6)$$

$$+ (5)$$

$$3, 2$$

Find each measurement indicated. Round your answers to the nearest tenth.

9) Find BC

$$\frac{b}{\sin B} = \frac{c}{\sin C} \quad \angle A = 127^\circ \quad a = 34 \text{ cm}$$

$$\angle B = 25^\circ \quad b = 18 \text{ cm}$$

$$a = \frac{b}{\sin 25^\circ} = \frac{18}{\sin 25^\circ} \quad \angle C = 28^\circ \quad c = 20 \text{ cm}$$

$$b \sin 28^\circ = \frac{20 \sin 25^\circ}{\sin 28^\circ} \quad b = 18.0$$

$$a^2 = b^2 + c^2 - 2bc (\cos 127^\circ)$$

$$a^2 = 18^2 + 20^2 - 2(18)(20)(\cos 127^\circ)$$

$$\sqrt{a^2} = \sqrt{1157.3}$$

$$a = 34$$

Find each measurement indicated. Round your answers to the nearest tenth.

10) Find $m\angle C$

39°

$$\sin C = \frac{O}{H}$$

$$\sin C = \frac{17}{27}$$

$$\sin^{-1} = 0.6296$$

$$C = 39^\circ$$

Quadratics Review

June 2

Factoring + Graphing

$$x^2 - 1 = 0$$

$$(x+1)(x-1) = 0$$

either $x+1=0$ or $x-1=0$

$$x = -1$$

SS $\{-1, 1\}$

same size
Vertex = $(0, -1)$

5. A wire attached to the top of a pole reaches a stake in the ground 20 feet from the foot of the pole and makes an angle of 58° with the ground. Find the length of the wire.

\therefore the wire is 37.7 ft

$$x = 37.7 \text{ ft}$$

$$\cos x = \frac{a}{h}$$

$$\cos 58 = \frac{20}{x}$$

$$\frac{x \cos 58 = 20}{\cos 58 \quad \cos 58}$$

$$x = 37.74 \text{ ft}$$

6. Henry is flying a kite. The kite string makes an angle of 43° with the ground. If Henry is standing 100 feet from a point on the ground directly below the kite, find the length of the kite string.

$$\cos 43 = \frac{A}{H}$$

$$\cos 43 = \frac{100}{x}$$

$$\frac{x \cos 43 = 100}{\cos 43 \quad \cos 43}$$

The kite string is $x = 136.7 \text{ ft}$

7. A 25 foot ladder leans against a building. The ladder's base is 13.5 feet from the building. Find the angle which the ladder makes with the ground.

7. A 25 foot ladder leans against a building. The ladder's base is 13.5 feet from the building. Find the angle which the ladder makes with the ground.

$$\cos X = \frac{a}{H}$$

$$\cos X = \frac{13.5}{25}$$

$$\cos X = 0.54$$

$$X = 57$$

The ladder will

make a 57° with the ground.

8. In order to reach the top of a hill which is 250 feet high, one must travel 2000 feet straight up a road which leads to the top. Find the number of degrees contained in the angle which the road makes with the horizontal.

$$\sin X = \frac{O}{H}$$

$$\sin X = \frac{250}{2000}$$

$$\sin^{-1} \frac{250}{2000}$$

$$\sin^{-1} X = 7$$

9. A ladder leans against a building. The top of the ladder reaches a point on the building which is 18 feet above the ground. The foot of the ladder is 7 feet from the building. Find the measure of the angle which the ladder makes with the level ground.
