

SOHCAHTOA - Solving For a Side Using an Angle

March 7, 2017

Find the missing side. Round to the nearest tenth.

$$\triangle = 180^\circ$$

$$\sin H < \sin T < \sin A$$

$$\tan \theta = \frac{O}{A}$$

$$\textcircled{1} \tan 49^\circ = \frac{17}{x}$$

This will only work when unknown is on the bottom

$$\textcircled{2} \tan 49^\circ = \frac{17}{x}$$

$$x = \frac{17}{\tan 49^\circ}$$

$$\cancel{x}(\tan 49^\circ) = 17$$

$$\frac{\cancel{x}(\tan 49^\circ)}{\tan 49^\circ} = \frac{17}{\tan 49^\circ}$$

$$x = \frac{17}{\tan 49^\circ}$$

$$\textcircled{3} \tan 49^\circ = \frac{17}{x}$$

$$x = \frac{17}{\tan 49^\circ}$$

Find the missing side. Round to the nearest tenth.

$$\underline{\sin \theta = \frac{O}{H}}$$

$$\sin 57^\circ = \frac{12}{x}$$

$$x = \frac{12}{\sin 57^\circ}$$

$$x = 14.3$$

Find the missing side. Round to the nearest tenth.

4)

SOHCAHTOA

$$\cos \theta = \frac{A}{H}$$

$$\cos 23^\circ = \frac{x}{15}$$

$$x = \cos 23 (15)$$

$$x = 13.8 \text{ units}$$
