

Review p. 334-335

Nov 3/15

Reminder - Test On Friday

$$3(m^2 + 3m - 5) + (2m^2 - 5m + 7)$$

$$= 1m^2 + 2m^2 + 3m - 5m - 5 + 7$$

$$= 3m^2 - 2m + 2$$

74

$$(5a^2 - 3a + 6) - (2a^2 + 3a + 7)$$
$$= 5a^2 - 3a + 6 - 2a^2 - 3a - 7$$

$$= 3a^2 - 6a - 1$$

$$\textcircled{39} 2(4x-1) - 4(2x-3)$$

$$= \cancel{8x} - 2 - \cancel{8x} + 12$$

$$= 10$$

$$\textcircled{34} 4x^2 - 7x + 5$$

$$- 7x^2 - 9x + 3$$

$$(4x^2 - 7x + 5) - (7x^2 - 9x + 3)$$

$$(48) -4a^2(-ab)$$

$$= 4ab$$

$$(59) (-5x^2y^2)^2$$

$$= -5^2 x^4 y^4$$

$$= 25x^4y^4$$

$$\textcircled{75} \frac{45a^3b^6}{9ab^4}$$

$$= 5a^2b^2$$

Test Friday
 Evaluation Due at the
 end of class
