

Multiplying Binomials

Find each product.

1) $(x+4)(x-5)$

$$= x^2 - 5x + 4x - 20$$

$$= x^2 - x - 20$$

3) $(2p-7)(2p-5)$

$$= 4p^2 - 10p - 14p + 35$$

$$= 4p^2 - 24p + 35$$

5) $3(x-5)(x+2)$

FOIL First

$$= 3(x^2 + 2x - 5x - 10)$$

$$= 3(x^2 - 3x - 10)$$

$$= 3x^2 - 9x - 30$$

7) $(x-5)(4x^2-4x-7)$

$$= 4x^3 - 4x^2 - 7x - 20x^2 + 20x + 35$$

$$= 4x^3 - 24x^2 + 13x + 35$$

2) $(x-8)(x-3)$

$$= x^2 - 3x - 8x + 24$$

$$= x^2 - 11x + 24$$

4) $(4n+3)(5n+6)$

$$= 20n^2 + 24n + 15n + 18$$

$$= 20n^2 + 39n + 18$$

6) $-4(2x+3)(3x+5)$

$$= -4(6x^2 + 10x + 9x + 15)$$

$$= -4(6x^2 + 19x + 15)$$

$$= -24x^2 - 76x - 60$$

8) $(3x+2)(5x^2+7x-1)$

$$= 15x^3 + 21x^2 - 3x + 10x^2 + 14x - 2$$

$$= 15x^3 + 31x^2 + 11x - 2$$
