Chapter 7 – Applications of Vectors

Contents with suggested problems from the Nelson Textbook (Chapter 7)

7.1 & 7.2 Vectors as Force and Acceleration – Pg. 133 – 136

Pg. 279 – 281 #1, 2, 4 – 10

7.3 The Dot Product: A Geometric View – Pg 137 – 139

Pg. 377 - 378 #1 – 16

7.4 The Dot Product: An Algebraic View – Pg 140 – 143

Pg. 385 – 387 #1 – 5, 6bc, 7, 9b, 10 – 13, 14, 15, 17

7.5 Projections: Scalar and Vector – Pg. 144 – 147

Pg. 398 – 400 #3, 4, 6 (scalar only), 7 (scalar only)

7.5b Projections: Scalar and Vector (2) – Pg. 148 – 149

Pg. 398 – 400 #8, 11, 12, 14, 15

7.6 The Cross Product – Pg. 150 – 152

Pg. 405 Investigation (optional)

Pg. 407 – 408 #1, 3, 4def, 5 – 7, 8a, 11

7.7 Applications of the Dot and Cross Products – Pg. 153 – 156

Pg. 415 #2, 3, 5, 6, 8, 10

7.1 & 7.2 Vectors as Force and Acceleration

Both **force** and **velocity** are ‘real world’ qualities which have **magnitude** (size) and **direction**. Thus we can use the mathematics of vectors to solve “real world problems”.

Example 7.1.1

A box is being pushed along the floor by Fred and Sally. Fred pushes the box with a force of $35N$ [right]. Sally pushes with a force of:

- a) $40N$ [right] b) $40N$ [left]

For a) and b) determine i) the resultant force \vec{f}_r and ii) the equilibrant of the system \vec{e} .

Example 7.1.2

Given the diagram of a system of forces, determine the resultant force \vec{f}_r , and the equilibrant \vec{e} .

Example 7.1.3

Consider the following sketch of a system of forces:

Determine \vec{f}_r .

Another look at Equilibrium

Recall that a system of vectors in can be represented by two “opposite” vectors:

Example 7.1.4

Given that three forces \vec{f}_1 , \vec{f}_2 , and \vec{f}_3 are in equilibrium, with \vec{f}_1 and \vec{f}_2 as shown, determine \vec{f}_3 (as a sketch).

Class/Homework for Section 7.1

*Pg. 362 – 364 #2 – 6, 8, 9, 15,
Pg. 369 – 370 #2 – 4, 6, 7, 9, 11*
