PART 1 USING THE TI-83 PLUS AND TI-84 GRAPHING CALCULATORS

1 Preparing the Calculator

Before you graph a function, be sure to clear any information left on the calculator from the last time it was used. You should always do the following:

1. Clear all data in the lists.

Press **2ND** **+** **4** **ENTER**.

2. Turn off all stat plots.

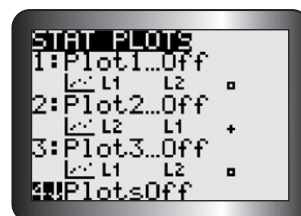

Press **2ND** **Y=** **4** **ENTER**.

3. Clear all equations in the equation editor.

Press **Y=**, and then press **CLEAR** for each equation.

4. Set the window so that the axes range from -10 to 10 .

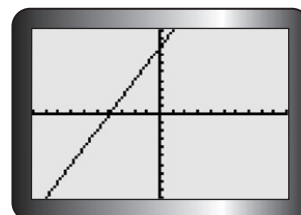

Press **ZOOM** **6**. Press **WINDOW** to verify.

2 Entering and Graphing a Function

1. Enter the equation of the function in the equation editor.

To graph $y = 2x + 8$, press **Y=** **2** **X,T,θ,n** **+** **8** **GRAPH**. The graph will be displayed as shown.

2. Enter all linear equations in the form $y = mx + b$.

If m or b are fractions, enter them between brackets. For example, write $2x + 3y = 7$ in the form $y = -\frac{2}{3}x + \frac{7}{3}$, and enter it as shown.

3. Press **GRAPH** to view the graph.

4. Press **TRACE** to find the coordinates of any point on the graph.

Use the left and right arrow keys to cursor along the graph.

Press **ZOOM** **8** **ENTER** **TRACE** to trace using integer values. If you are working with several graphs at the same time, use the up and down arrow keys to scroll between graphs.

3 Evaluating a Function

1. Enter the function in the equation editor.

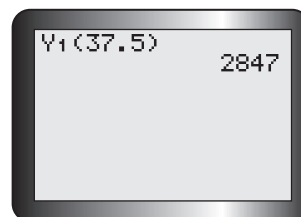

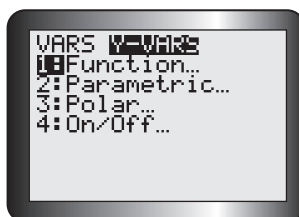

To enter $y = 2x^2 + x - 3$, press $\boxed{Y=}$ $\boxed{2}$ $\boxed{X, T, \theta, n}$ $\boxed{X^2}$ $\boxed{+}$ $\boxed{X, T, \theta, n}$ $\boxed{-}$ $\boxed{3}$.

2. Use the value operation to evaluate the function.

To find the value of the function at $x = -1$, press $\boxed{2ND}$ \boxed{TRACE} \boxed{ENTER} , enter $\boxed{(-)}$ $\boxed{1}$ at the cursor, and then press \boxed{ENTER} .

3. Use function notation and the Y-VARS operation to evaluate the function.

This is another way to evaluate the function. To find the value of the function at $x = 37.5$, press \boxed{CLEAR} \boxed{VAR} . Then cursor right to **Y-VARS**, and press \boxed{ENTER} . Press $\boxed{1}$ to select **Y1**. Finally, press $\boxed{(}$ $\boxed{3}$ $\boxed{7}$ $\boxed{.}$ $\boxed{5}$ $\boxed{)}$, and then \boxed{ENTER} .

4 Changing Window Settings

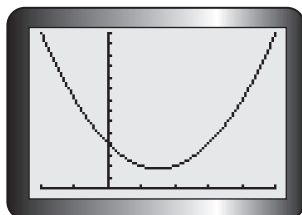

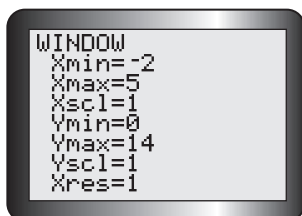

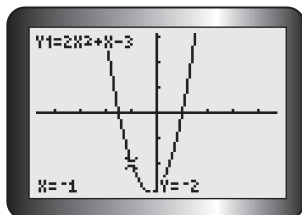

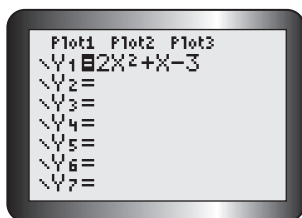

The window settings can be changed to show a graph for a given domain and range.

1. Enter the function $y = x^2 - 3x + 4$ in the equation editor.
2. Use the WINDOW function to set the domain and range.

To display the function over the domain $\{x | -2 \leq x \leq 5\}$ and range

$\{y | 0 \leq y \leq 14\}$, press \boxed{WINDOW} $\boxed{(-)}$ $\boxed{2}$ \boxed{ENTER} , then $\boxed{5}$ \boxed{ENTER} , then $\boxed{1}$ \boxed{ENTER} , then $\boxed{0}$ \boxed{ENTER} , then $\boxed{1}$ $\boxed{4}$ \boxed{ENTER} , then $\boxed{1}$ \boxed{ENTER} , and finally $\boxed{1}$ \boxed{ENTER} .

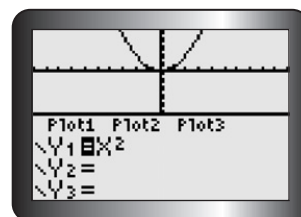

3. Press \boxed{GRAPH} to show the function with this domain and range.

5 Using the Split Screen

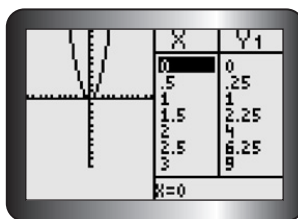

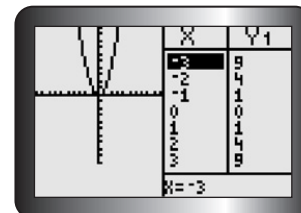

1. The split screen can be used to see a graph and the equation editor at the same time.

Press **MODE** and cursor to **Horiz**. Press **ENTER** to select this, and then press **2ND** **MODE** to return to the home screen. Enter $y = x^2$ in **Y1** of the equation editor, and then press **GRAPH**.

2. The split screen can also be used to see a graph and a table at the same time.

Press **MODE** and cursor to **G-T** (Graph-Table). Press **ENTER** to select this, and then press **GRAPH**. It is possible to view the table with different increments. For example, to see the table start at $x = 0$ and increase in increments of 0.5, press **2ND** **WINDOW** and adjust the settings as shown. Then press **GRAPH**.

6 Using the TABLE Feature

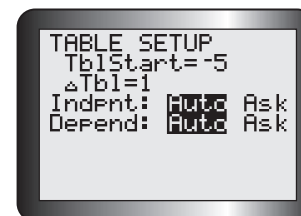

A function can be displayed in a table of values.

1. Enter the function in the equation editor.

To enter $y = -0.1x^3 + 2x + 3$, press **Y=** **(-)** **.** **1** **X, T, Θ, n** **^** **3** **+** **2** **X, T, Θ, n** **+** **3**.

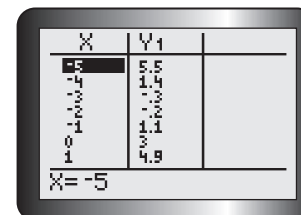

2. Set the start point and step size for the table.

Press **2ND** **WINDOW**. The cursor is beside "TblStart=." To start at $x = -5$, press **(-)** **5** **ENTER**. The cursor is now beside **ΔTbl=**. To increase the x -value in steps of 1, press **1** **ENTER**.

3. To view the table, press **2ND** **GRAPH**.

Use the up and down arrow keys to move up and down the table. Notice that you can look at higher or lower x -values than those in the original range.

7 Making a Table of Differences

To make a table with the first and second differences for a function, use the STAT lists.

1. Press **STAT** **1**, and enter the x -values in L1.

For the function $f(x) = 3x^2 - 4x + 1$, use x -values from -2 to 4 .

L1	L2	L3
-2		
-1		
0		
1		
2		
3		
4		

L2 = "3L1^2-4L1+1"

2. Enter the function.

Scroll right and up to select L2. Enter the function $f(x)$, using L1 as the variable x . Press

ALPHA **+** **3** **2ND** **1** **X²**
- **4** **2ND** **1** **+** **1** **ALPHA** **+**.

3. Press **ENTER** to display the values of the function in L2.

L1	L2	L3
-2	21	
-1	8	
0	1	
1	0	
2	5	
3	11	
4	16	

L3() = -13

4. Find the first differences.

Scroll right and up to select L3. Then press **2ND** **STAT**.

Scroll right to OPS, and press **7** to choose Δ List(.

Enter L2 by pressing **2ND** **2** **)**.

Press **ENTER** to see the first differences displayed in L3.

5. Find the second differences.

Scroll right and up to select L4. Repeat step 4, using L3 instead of L2.

Press **ENTER** to see the second differences displayed in L4.

L2	L3	L4
21	-13	19
8	-7	11
1	-1	5
0	5	11
5	11	17
16	17	
33		

L4() = 6

8 Finding the Zeros of a Function

To find the zeros of a function, use the **zero** operation.

1. Enter $y = -(x + 3)(x - 5)$ in the equation editor.

Press **GRAPH** **ZOOM** **6**.

2. Access the zero operation.

Press **2ND** **TRACE** **2**.

CALCULATE
1:value
2:zero
3:minimum
4:maximum
5:intersect
6:dy/dx
7:∫f(x)dx

- Use the left and right arrow keys to cursor along the curve to any point that is left of the zero.

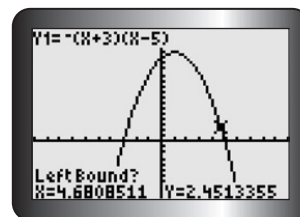

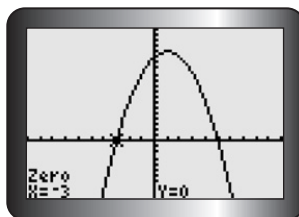

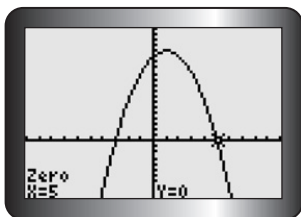

Press **ENTER** to set the left bound.

- Cursor along the curve to any point that is right of the zero.

Press **ENTER** to set the right bound.

- Press **ENTER** again to display the coordinates of the zero (the x -intercept).

- Repeat to find the second zero.

9 Finding the Maximum or Minimum Values of a Function

The least or greatest value can be found using the **minimum** operation or the **maximum** operation.

- Enter $y = -2x^2 - 12x + 30$.

Graph it, and adjust the window as shown. This graph opens downward, so it has a maximum.

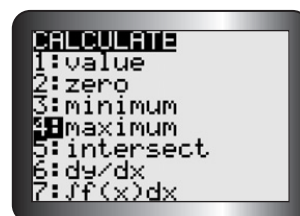

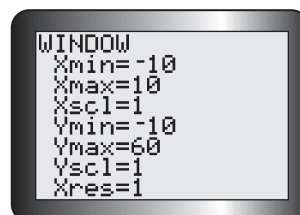

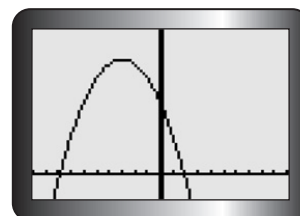

- Use the maximum operation.

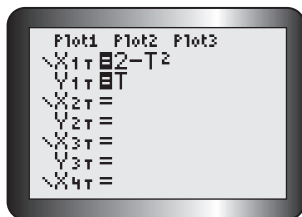

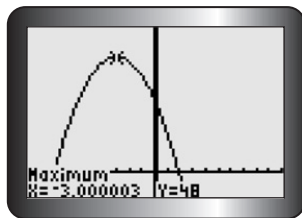

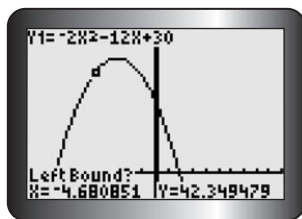

Press **2ND** **TRACE** **4**. For parabolas that open upward,

press **2ND** **TRACE** **3** to use the **minimum** operation.

- Use the left and right arrow keys to cursor along the curve to any point that is left of the maximum value.

Press **ENTER** to set the left bound.

4. Cursor along the curve to any point that is right of the maximum value.

Press **ENTER** to set the right bound.

5. Press **ENTER** again to display the coordinates of the optimal value.

10 Graphing the Inverse of a Function

Parametric equations allow you to graph any function and its inverse. For example, the function $y = 2 - x^2$, with domain $x \geq 0$, can be graphed using parametric mode. For a parametric equation, both x and y must be expressed in terms of a parameter, t . Replace x with t . Then $x = t$ and $y = 2 - t^2$. The inverse of this function can now be graphed.

1. Clear the calculator, and press **MODE**.

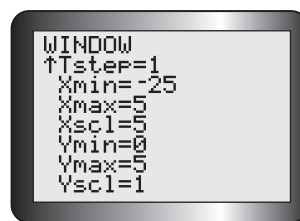

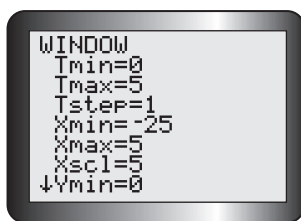

Change the setting to the parametric mode by scrolling down to the fourth line and to the right to **Par**, as shown on the screen. Press **ENTER**.

2. Enter the inverse function by changing the parametric equations $x = t, y = 2 - t^2$ to $x = 2 - t^2, y = t$.

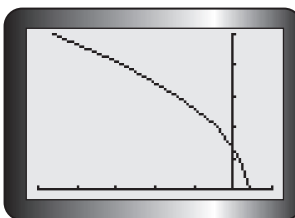

Press **Y=**. At **X1T=**, enter **2** **-** **X, T, θ , n** **X²**
ENTER. At **Y1T=**, enter **X, T, θ , n**.

3. Press **WINDOW**.

The original domain, $x \geq 0$, is also the domain of t . Use window settings such as those shown below to display the graph.

4. Press **GRAPH** to display the inverse function.

11 Creating a Scatter Plot and Determining a Line or Curve of Best Fit Using Regression

This table gives the height of a baseball above ground, from the time it was hit to the time it touched the ground.

Time (s)	0	1	2	3	4	5	6
Height (m)	2	27	42	48	43	29	5

To create a scatter plot of the data, follow the steps below.

1. Enter the data into lists.

To start, press **STAT** **ENTER**. Move the cursor over to the first position in **L1**, and enter the values for time. Press **ENTER** after each value. Repeat this for height in **L2**.

2. Create a scatter plot.

Press **2ND** **Y=** and **1** **ENTER**. Turn on Plot 1 by making sure that the cursor is over **On**, the **Type** is set to the graph type you prefer, and **L1** and **L2** appear after **Xlist** and **Ylist**.

3. Display the graph.

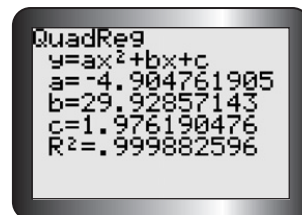

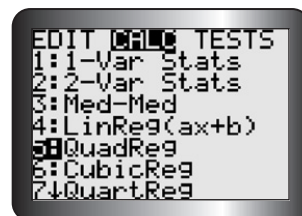

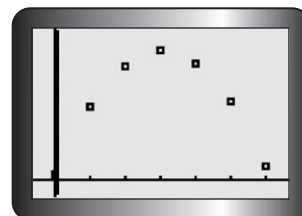

Press **ZOOM** **9** to activate **ZoomStat**.

4. Apply the appropriate regression analysis.

To determine the equation of the line or curve of best fit, press **STAT** and scroll over to **CALC**. Press

- **4** to enable **LinReg(ax+b)**
- **5** to enable **QuadReg**
- **6** to enable **CubicReg**
- **7** to enable **QuartReg**
- **0** to enable **ExpReg**
- **ALPHA** **C** to enable **SinReg**

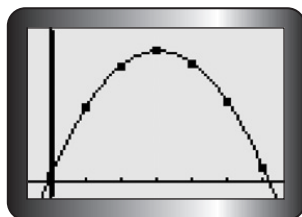

Then press **2ND** **1** **,** **2ND** **2** **,** **VAR**. Scroll over to **Y-VARS**. Press **1** twice. This action stores the equation of the line or curve of best fit in **Y1** of the equation editor.

5. Display and analyze the results.

Press **ENTER**. In this example, the letters a , b , and c are the coefficients of the general quadratic equation $y = ax^2 + bx + c$ for the curve of best fit. R^2 is the percent of data variation represented by the model. The equation is about $y = -4.90x^2 + 29.93x + 1.98$.

Note: For linear regression, if r is not displayed, turn on the diagnostics function. Press **2ND** **0** and scroll down to **DiagnosticOn**. Press **ENTER** twice. Repeat steps 4 to 6.

6. Plot the curve.

Press **GRAPH**.

12 Finding the Points of Intersection of Two Functions

1. Enter both functions in the equation editor.

For example, enter $y = 5x + 4$ and $y = -2x + 18$.

2. Graph both functions.

Press **GRAPH**. Adjust the window settings until one or more points of intersection are displayed.

3. Use the intersect operation.

Press **2ND** **TRACE** **5**.

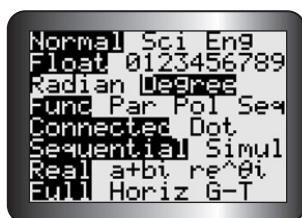

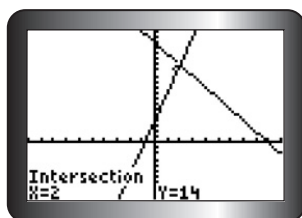

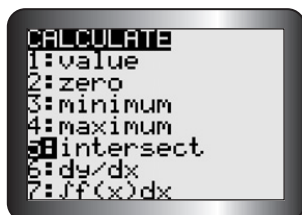

4. Determine a point of intersection.

You will be asked to verify the two curves and enter a guess (optional) for the point of intersection. Press **ENTER** after each screen appears.

The point of intersection is exactly $(2, 14)$.

5. Determine any additional points of intersection.

Press **TRACE**, and move the cursor close to the other point you wish to identify. Repeat step 4.

13 Evaluating Trigonometric Ratios and Finding Angles

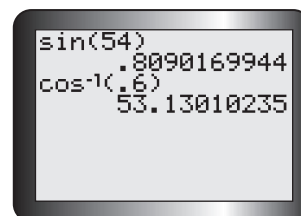

Working with Degrees

1. Put the calculator in degree mode.

Press **MODE**. Scroll down and across to **Degree**. Press **ENTER**.

2. Use the **SIN**, **COS**, or **TAN** key to calculate a trigonometric ratio.

To find the value of $\sin 54^\circ$, press **SIN** **5** **4** **)** **ENTER**.

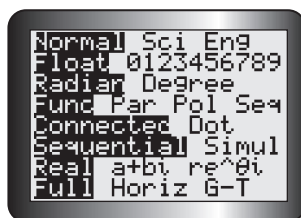

3. Use SIN^{-1} , COS^{-1} , or TAN^{-1} to calculate an angle.

To find the angle whose cosine is 0.6, press **2ND** **COS** **.** **6** **)** **ENTER**.

Working with Radians

1. Put the calculator in radian mode.

Press **MODE**. Scroll down and across to **Radian**. Press **ENTER**.

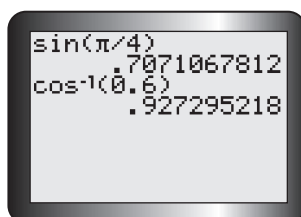

2. Use the **SIN**, **COS**, or **TAN** key to calculate a trigonometric ratio.

To find the value of $\sin \frac{\pi}{4}$, press **SIN** **2ND** **^** **÷** **4** **)** **ENTER**.

3. Use SIN^{-1} , COS^{-1} , or TAN^{-1} to calculate an angle.

To find the angle whose cosine is 0.6, press **2ND** **COS** **.** **6** **)** **ENTER**.

14 Graphing a Trigonometric Function

Working with Degrees

You can graph a trigonometric function in degree measure using the TI-83 Plus or TI-84 calculator.

1. Put the calculator in degree mode.

Press **MODE**. Scroll down and across to **Degree**. Press **ENTER**.

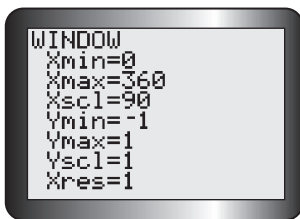

2. Enter the function in the equation editor.

For example, to graph the function $y = \sin x$, for $0^\circ \leq x \leq 360^\circ$, press

Y= **SIN** **(X, T, θ , n)** **)**.

3. Adjust the window to correspond to the given domain.

Press **WINDOW**. Set **Xmin** = 0, **Xmax** = 360, and **Xscl** = 90. These settings display the graph from 0° to 360° , using an interval of 90° on the x -axis. Then set **Ymin** = -1 and **Ymax** = 1, since the sine function being graphed lies between these values. If the domain is not known, this step can be omitted.

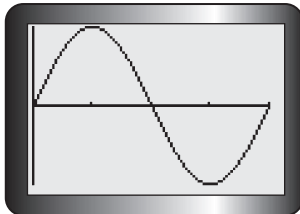

step 3

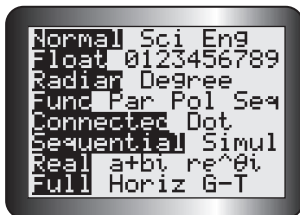

4. Graph the function using ZoomFit.

Press **ZOOM** **0**. The graph is displayed over the domain, and the calculator determines the best values to use for **Ymax** and **Ymin** in the display window.

Note: You can use **ZoomTrig** (press **ZOOM** **7**) to graph the function in step 4. **ZoomTrig** will always display the graph in a window where **Xmin** = -360° , **Xmax** = 360° , **Ymin** = -4, and **Ymax** = 4.

step 4

Working with Radians

You can also graph a trigonometric function in radians using the TI-83 Plus or TI-84 calculator.

1. Put the calculator in radian mode.

Press **MODE**. Scroll down and across to **Radian**. Press **ENTER**.

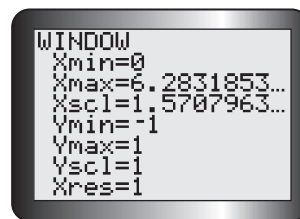

2. Enter the function in the equation editor.

For example, to graph the function $y = \sin x$, for $0 \leq x \leq 2\pi$, press

Y= **SIN** **(X, T, θ , n)** **)**.

3. Adjust the window to correspond to the given domain.

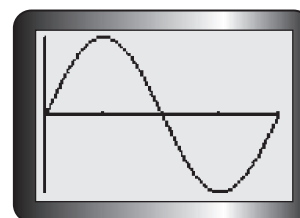

Press **WINDOW**. Set **Xmin** = 0, **Xmax** = 2π , and **Xscl** = $\frac{\pi}{2}$. These settings display the graph from 0 to 2π , using an interval of $\frac{\pi}{2}$ on the x -axis. Then set **Ymin** = -1 and **Ymax** = 1, since the sine function being graphed lies between these values. If the domain is not known, this step can be omitted.

4. Graph the function using ZoomFit.

Press **ZOOM** **0**. The graph is displayed over the domain, and the calculator determines the best values to use for **Ymax** and **Ymin** in the display window.

Note: You can use **ZoomTrig** (press **ZOOM** **7**) to graph the function in step 4. **ZoomTrig** will always display the graph in a window where **Xmin** = -2π , **Xmax** = 2π , **Ymin** = -4, and **Ymax** = 4.

15 Evaluating Powers and Roots

1. Evaluate the power $(5.3)^2$.

Press **5** **.** **3** **X²** **ENTER**.

2. Evaluate the power 7.5^5 .

Press **7** **.** **5** **^** **5** **ENTER**.

3. Evaluate the power $8^{-\frac{3}{2}}$.

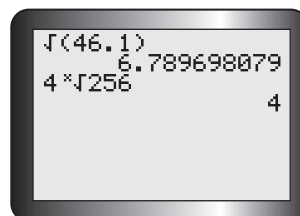

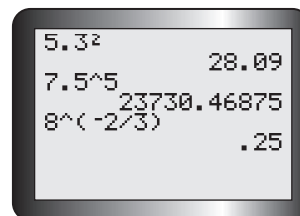

Press **8** **^** **(** **-** **2** **÷** **3** **)** **ENTER**.

4. Evaluate the square root of 46.1.

Press **2ND** **X²** **4** **6** **.** **1** **)** **ENTER**.

5. Evaluate $\sqrt[4]{256}$.

Press **4** **MATH** **5** **2** **5** **6** **ENTER**.

16 Graphing a Piecewise Function

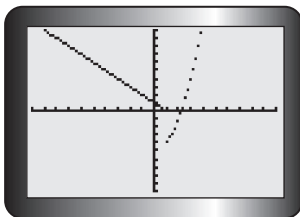

Follow these steps to graph the piecewise function defined by

$$f(x) = \begin{cases} -x + 1, & \text{if } x < 1 \\ x^2 - 5, & \text{if } x \geq 1 \end{cases}$$

1. Enter the first equation.

In the equation editor for **Y1**, enter the first equation in brackets. Then enter its corresponding interval in brackets. The inequality signs can be accessed in the **Test** menu by pressing **2ND** **MATH**.

2. Enter the second equation.

Press **+**, and repeat step 1 for the second equation and its interval.

Scroll to the left of **Y1**, and press **ENTER** until the dotted graphing mode appears.

3. Display the graph.

Press **GRAPH** to display the graph.

Each equation produces a different graph on each interval. This function is discontinuous at $x = 1$.

17 Performing Operations Specific to Calculus

Drawing Tangent Lines

1. Enter a function to be graphed.

Enter $V(t) = \frac{1}{9}(120 - t)^2$ in **Y1** of the equation editor. Adjust the window, and display the graph.

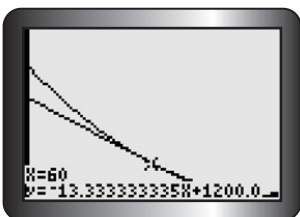

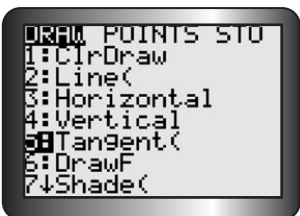

2. Draw a tangent line at the desired point.

Use the **Tangent** command in the **Draw** menu to draw a tangent line at a point and estimate its slope. Press **2ND** **PRGM**. Choose

5:Tangent(. Scroll to 60, or enter 60, for the x -coordinate. Press

ENTER. The tangent line is drawn, and its equation is displayed. Press

2ND **PRGM** **1** to clear the drawn tangent lines. The function will be regraphed without the tangent lines.

Graphing the First and Second Derivatives of a Function

1. Enter a function to be graphed.

Enter a function, such as $y = x^2$, in **Y1** of the equation editor. Press **ENTER**.

2. Graph the first derivative.

To graph the derivative, use the **nDeriv** operation. Press **MATH** **8**.

To enter the expression **Y1**, press **VARS**. Scroll over to **Y-VARS**. Press

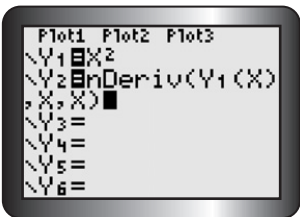

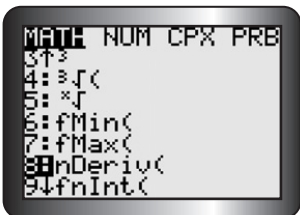

1 twice. Press **(** **X,T,Θ,n** **)** **,** **X,T,Θ,n** **,**

X,T,Θ,n **)** to enter the expression, variable name, and general value

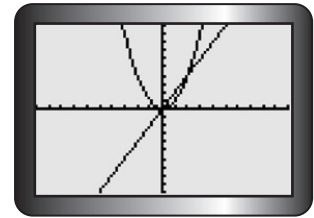

of x . Press **GRAPH**. The original function is graphed first, and

the derivative is graphed next. **nDeriv(** approximates the derivative.

3. Graph the second derivative.

To graph the second derivative, enter **nDeriv(Y2(X), X, X)** in **Y3**. (See step 2.) Remember to select **Y2** from the **Function** menu. You can deselect a function to be graphed. Position the cursor over the equal sign of the desired function in the equation editor. Press **ENTER**. Only the functions whose equal signs are shaded will be graphed when **GRAPH** is pressed.

PART 2 USING THE GEOMETER'S SKETCHPAD

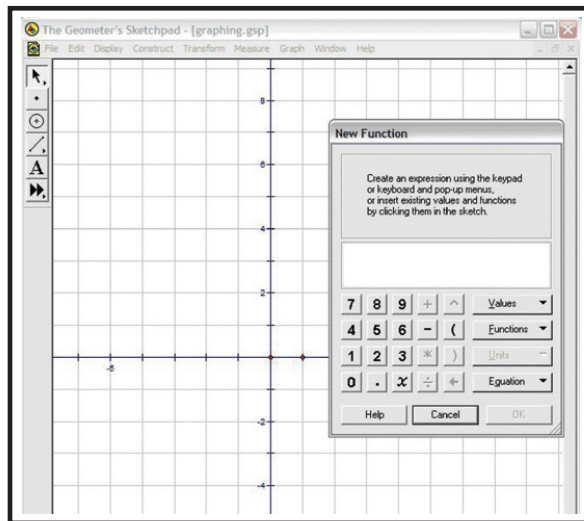

18 Graphing a Function

1. Turn on the grid.

From the **Graph** menu, choose **Show Grid**.

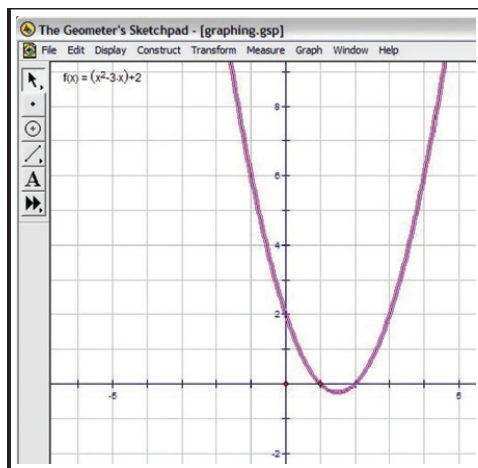

2. Enter the function.

From the **Graph** menu, choose **Plot New Function**. The function calculator should appear.

3. Graph the function $y = x^2 - 3x + 2$.

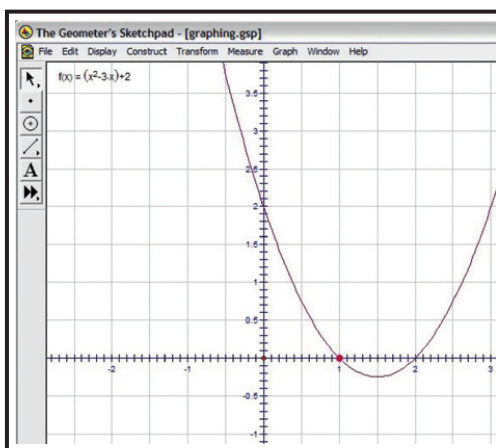

Use either the calculator keypad or the keyboard to enter $x^2 - 3x + 2$. Then press on the calculator keypad. The graph of $y = x^2 - 3x + 2$ should appear on the grid.

4. Adjust the origin and/or scale.

To adjust the origin, left-click on the point at the origin to select it. Then left-click and drag the origin as desired.

To adjust the scale, left-click in blank space to deselect, and then left-click on the point at (1, 0) to select it. Left-click and drag this point to change the scale.

19 Graphing a Trigonometric Function

1. Turn on the grid.

From the **Graph** menu, choose **Show Grid**.

2. Graph the function $y = 2 \sin(30x) + 3$.

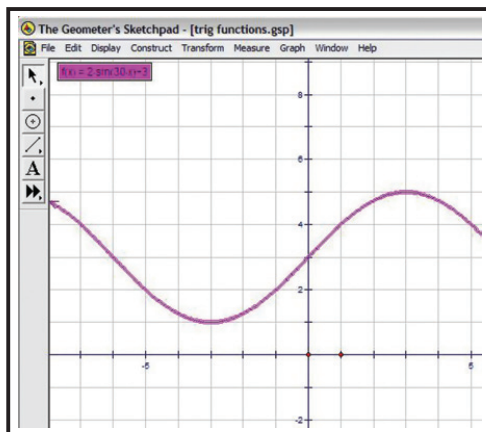

From the **Graph** menu, choose **Plot New Function**. The function calculator should appear.

Use either the calculator keypad or the keyboard to enter

$2 * \sin(30 * x) + 3$. To enter sin, use the pull-down **Functions**

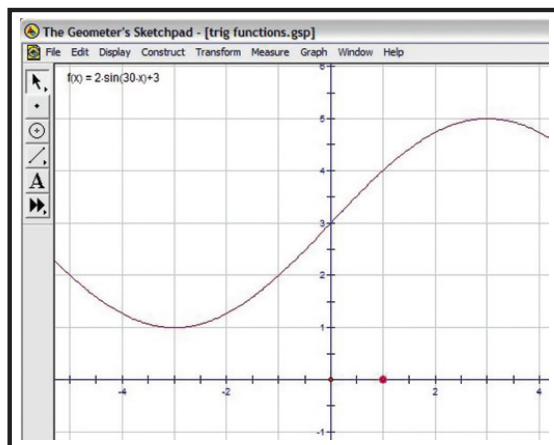

menu on the calculator keypad. Click on the calculator keypad.

Click **No** in the pop-up panel to keep degrees as the angle unit. The graph of $y = 2 \sin(30x) + 3$ should appear on the grid.

3. Adjust the origin and/or scale.

Left-click on and drag either the origin or the point (1, 0).

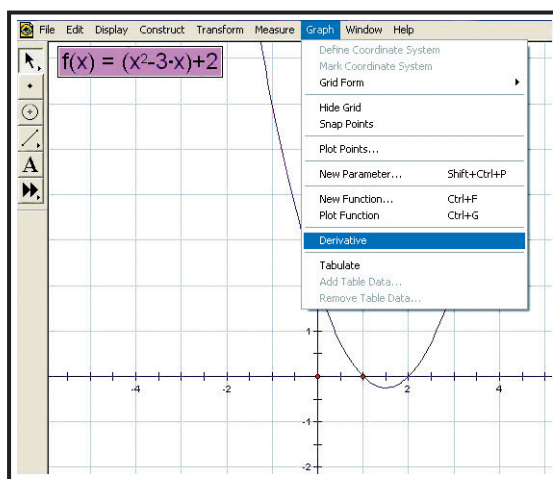

20 Graphing the Derivative of a Function

1. Graph the function $y = x^2 - 3x + 2$.

Follow the instructions as outlined in Technical Appendix 18, Graphing Functions, to graph the given function.

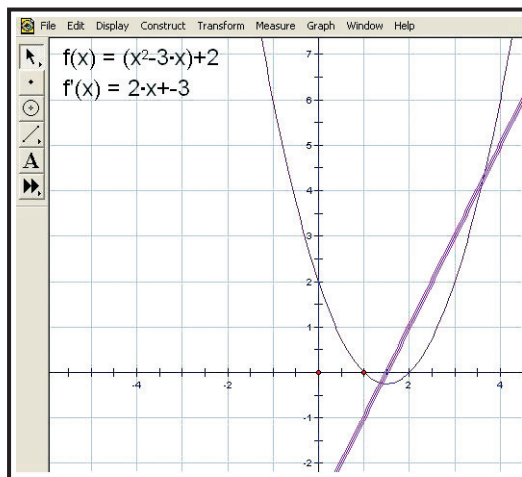

2. Select the equation of the function whose derivative is to be determined.

With the equation of the function selected, choose **Derivative** from the **Graph** menu. The equation of $f'(x)$ will be displayed.

3. Graph the derivative function.

With the equation of the derivative function selected, chose **Plot Function** from the **Graph** menu. The graph of $f'(x)$ will be displayed.

PART 3 USING FATHOM

21 Creating a Scatter Plot and Determining the Equation of a Line or Curve of Good Fit

1. Create a case table.

Drag a case table from the object shelf, and drop it in the document.

2. Enter the Variables and Data.

Click <new>, type a name for the new variable or attribute, and press

ENTER

. (If necessary, repeat this step to add more attributes; Pressing

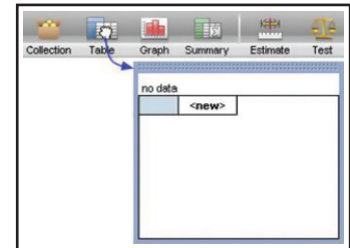

TAB

instead of ENTER moves you to the next column.)

When you name your first attribute, Fathom creates an empty collection to hold your data (a little, empty box). This is where your data are actually stored. Deleting the collection deletes your data. When you add cases by typing values, the collection icon fills with gold balls. To enter the data, click in the blank cell under the attribute name and begin typing values. (Press

TAB

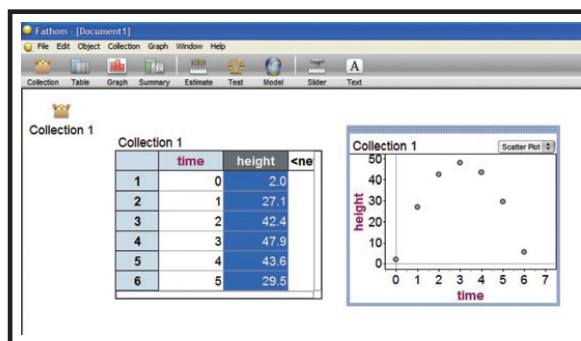

to move from cell to cell.)

	time	height	<new>
1	0	2.0	
2	1	27.1	
3	2	42.4	
4	3	47.9	
5	4	43.6	
6	5	29.5	

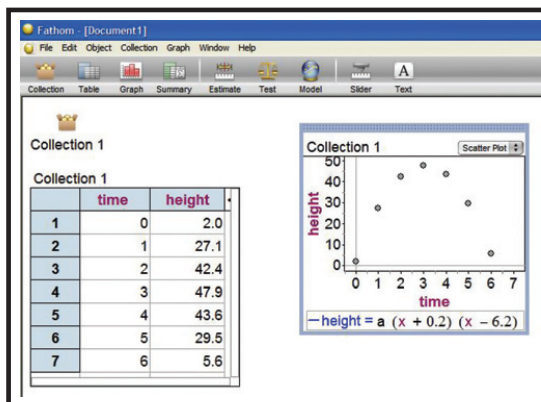

3. Graph the data.

Drag a new graph from the object shelf at the top of the Fathom window, and drop it in a blank space in your document. Drag an attribute from the case table, and drop it on the prompt below and/or to the left of the appropriate axis in the graph.

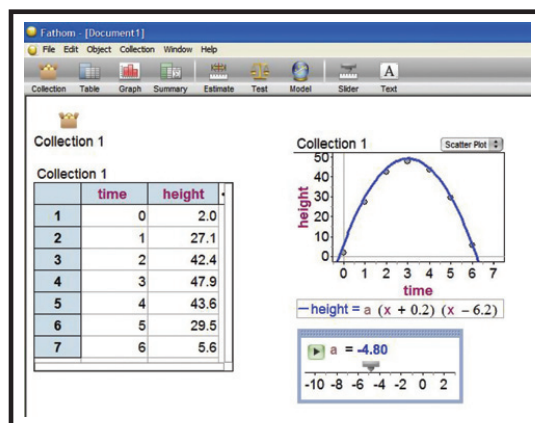

4. Create a function.

Right-click the graph, and select **Plot Function**. Enter your function using a parameter that can be adjusted to fit the curve to the scatter plot (**a** was used below).

5. Create a slider for the parameter(s) in your equation.

Drag a new slider from the object shelf at the top of the Fathom window, and drop it in a blank space below your graph. Over V1, type in the letter of the parameter used in your function in step 4. Click on the number, and then adjust the value of the slider until you are satisfied with the fit.

The equation of a curve of good fit is $y = -4.8(x + 0.2)(x - 6.2)$.
